✔ **Doctype** Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in.

Doctype is the first line of the HTML document. It tells the browser which version of HTML the document is written in. The most common doctype is HTML5. It is important to have a doctype because it affects the rendering of the page. Without a doctype, the browser will use a default doctype, which may not be the one you want. The doctype also affects the validation of the document. A valid doctype is required for a document to be considered valid.

● **W3C Validity** W3C Validity is a tool that checks if your HTML document is valid according to the W3C standards.

W3C - World Wide Web Consortium. It is an international community that develops and maintains standards for the World Wide Web. The W3C standards are used to ensure that web pages are consistent and interoperable. The W3C Validity tool is a free online tool that checks if your HTML document is valid according to the W3C standards. It is a useful tool for developers and designers who want to ensure that their web pages are valid and consistent.

✔ **Charset** Charset is the character set used in the document. It tells the browser which characters are used in the document.

Charset is the character set used in the document. It tells the browser which characters are used in the document. The most common charset is UTF-8. It is important to have a charset because it affects the rendering of the page. Without a charset, the browser will use a default charset, which may not be the one you want. The charset also affects the validation of the document. A valid charset is required for a document to be considered valid.
